NEWS RELEASE

EnGro initiates the inaugural Friends of Building Sustainability (FBS) Community event

-  FBS Community off to a good start representing united interest by various local companies to embark on joint programs to boost the local green movement
-  EnGro initiates the FBS Community as part of its social calling to contribute towards promotion of greater interest in the preservation of the “Triple Bottomline” of “People-Planet-Profit”

SINGAPORE, 28 JULY 2010 – Mr. Tan Cheng Gay, Chairman and CEO of EnGro Corporation Limited (“EnGro” or the “Group”), one of Asia’s largest producers of eco-friendly Green Cement, launched the Friends of Building Sustainability (FBS) community on the 27th of July 2010 during the FBS inaugural event which was held at the German Centre in International Business Park at Jurong East.

The FBS community's inaugural event named the ***“Green Knowledge Exchange Roundtable Dialogue”*** saw the participation of more than 20 local companies as well as government agencies and local associations with more than 50 participants having attended the event.

Participants were treated to insightful presentations from prominent speakers covering topics related to the theme ***“Sustainability Development in Practice”***. Dr. Song Bin from SIMTech, shared about the principle behind the development of the “Singapore Carbon Label” which is expected to be jointly launch by SIMTech and Singapore Environment Council (SEC) nearer to the end of 2010.

Dr. Edward Anggadaja from BCA, gave an overview about BCA's efforts in promoting sustainable construction while Mr. Wong Chung Wan from SGBC shared about the industry perspective of green building trends. The last two presenters, Mr. Royston Lek from Jurong Port and Ms. Genevieve Chua from PaperlinX Singapore shared their respective company's experience in going green.

EnGro Chairman & CEO Mr Tan Cheng Gay with speakers of the FBS Roundtable Dialogue

“We believe in “partnership building” as the way to do business. This core principle that we adhere to is also the fundamental building blocks behind the initiation of the Friends of Building Sustainability Community (or FBS Community in short). It is hoped that the FBS community will function as a multi-stakeholder private initiative which brings together environmental-conscious like-minded companies from various sectors that are keen to go green together by learning and sharing their green knowledge and experience with friends of the community.

Climate change issues become more challenging and real for businesses. Hence, we need to see how we can optimise and use our resources more efficiently by combining efforts to implement sustainable development practices that are innovative, cost-effective and truly sustainable. With a united community approach, FBS can be used as a platform for FBS members to gain access to aggregated knowledge, experience and insights, thereby spurring more industry-led activities to boost the local green movement.”

- Mr Tan Cheng Gay, Chairman and CEO

Participants at the FBS roundtable dialogue

The attendees were greatly appreciative of EnGro's effort to initiate the FBS community private initiative and actively participated in the "knowledge exchange discussion". Participants also indicated keen interest to participate in future FBS events.

Notes:

About EnGro Corporation Limited (“EnGro”)

EnGro has established itself as a leading specialty cement producer in Singapore. Since 2005, the Group has strengthened the supply-chain by leveraging on its GGBS joint venture production base in China coupled with its Pulau Damar Laut bulk-terminal cum logistics services undertaken by Top-Mix ready-mix concrete operations.

The extended supply chain allows EnGro to meet stringent requirement for specialty cement and high-performance concrete supply. With this integration, EnGro is able to undertake supply of voluminous quantity timely to prestigious mega projects. As the first local cement company granted the Singapore Green Label for its eco-friendly VCEM brand of GGBS products, EnGro is well-positioned to contribute to the growing green building needs of the regional construction industry.

EnGro has built 2 core businesses, namely the specialty cement and the specialty polymer. Operationally, it is driven by these 2 growth engines supplemented by evergreen venture capital (VC) investment activity in technology-driven businesses.

About the Friends of Building Sustainability (“FBS”) community

The Friends of Building Sustainability community is a multi-stakeholder private initiative serving various industry sectors in hope of bringing together like-minded entities who want to share and exchange up-to-date knowledge related to sustainable development and climate change whilst encouraging cross-fertilizing of innovative ideas that allow entities to enhance their “green” awareness.

The FBS community, due to its private and informal structure, hopes to forge a symbiotic working relationship with various Singapore government statutory bodies and agencies to encourage private entities implement and embed sustainable development best practices into their corporate DNA.
